SUMMARY

I'm currently building my career in the Data and AI domain with experience in Python, SQL, data analysis, EDA, visualization, and machine learning fundamentals. I've worked on projects involving customer analytics, Building predictive models, and data-driven problem solving, which helped me strengthen both my analytical and technical skills.

I enjoy learning new technologies, solving real-world problems using data, and continuously improving my practical knowledge. Right now, I'm looking for an internship opportunity where I can gain industry exposure, contribute effectively, and grow professionally in this domain. I'm also contributing to building a startup

EDUCATION

Bachelor of Computer Applications Hons - BCIIT

2024-2028

current cgpa - 7.5

PROFESSIONAL EXPERIENCE

Go_Repireo — Technical & Marketing Support

April 2026 - Present
part time , Remote

- Performed data cleaning, duplicate removal, and data validation on customer datasets using Excel and SQL to improve data accuracy and consistency.
- Supported website operations and handled technical issue resolution to ensure smooth internal workflow and system functionality.
- Managed social media presence and created digital content strategies to enhance brand visibility, engagement, and online growth.

GoodHealth Medtech Pvt. Ltd. — Data Management Intern

May 2026 - June 2026
part time , Remote

- Scraped and collected 10,000+ rows of raw data from multiple sources and performed extensive data cleaning to remove duplicates, inconsistencies, and irrelevant records.
- Structured, organized, and maintained cleaned datasets using MS Excel, ensuring high data accuracy and analysis readiness.
- Applied data wrangling and preprocessing techniques to filter, standardize, and optimize datasets for efficient data management and reporting.

PROJECTS

Banking Customer Intelligence Analysis - Performed EDA, statistical analysis, and feature engineering on 45,000+ banking records to uncover customer behaviour patterns and key churn drivers. - Identified major factors influencing customer churn and retention, enabling data-driven strategies to improve customer targeting and profitability. - Analyzed customer datasets to discover high-risk churn segments and high-value customers for better business decision-making.	Document Management System (DocManager) - Built a document management system using Python, Streamlit, and database integration to organize and manage files efficiently. - Developed features for tagging, smart search, and structured storage to enable quick retrieval of important documents and information. - Implemented tracking and analytics to monitor document status (completed/pending), improving workflow visibility and productivity.	Customer Prediction Model ongoing - Built a machine learning model on banking customer data to predict customer outcomes using historical behavioral patterns. - Applied feature engineering and statistical analysis to identify key factors influencing customer decisions. - Developed a predictive system to support data-driven targeting and improve business decision-making efficiency.

SKILLS

- Programming Languages:**

Python, SQL (PostgreSQL), MS Excel
- Data Science Skills:**

Exploratory Data Analysis (EDA), Statistics, Feature Engineering, Data Cleaning, Data Visualization
- Machine Learning:**

Basic Machine Learning, Predictive Modeling Basic
- Libraries & Frameworks:**

Pandas, NumPy, Matplotlib, Scikit-learn
- Tools & Platforms:**

Jupyter Notebook, Git, GitHub
- AI & Productivity Tools:**

Claude, GitHub Copilot, NotebookLM, Antigravity

ACHIEVEMENTS

Top 100 finalist in Elite Her Hackathon 2026 (900+ teams) as part of TEAM : ALGOACES
awarded Certificate of Achievement for performance and innovation.
